

The cost to install a new toilet can vary depending on various factors such as **your location**, the complexity of the installation, and whether any additional plumbing work is required. **On average, you can expect to pay anywhere from \$150 to \$500 for professional installation.**

**In some cases, this price may include the cost of the toilet itself, but it's important to clarify this with the plumber** beforehand. If you're purchasing the toilet separately, make sure to factor in the cost of the toilet itself, which can range from \$100 to \$500 or more depending on the brand, features, and quality.

Keep in mind that these are just rough estimates, and prices can vary. It's always a good idea to get quote from plumbers in your area to compare prices and find the best deal. Additionally, consider the reputation and qualifications of the plumber to ensure a professional installation.

**Toilet Repair & Installation**

**PHONE:**  **224-754-1984**

**Emergency Plumbing, HVAC  
North Shore, Northwest**

Chicago

The complex block features a map of the Chicago area with numerous blue circular icons containing a white toilet and a wrench, indicating service locations. To the right is a cartoon plumber character in a blue cap and overalls, holding a red toolbox and a red pipe wrench. Below the character is a white sign with the phone number and a phone icon. The text 'Emergency Plumbing, HVAC North Shore, Northwest' is written in blue and red below the sign. The word 'Chicago' is written in black at the bottom right of the map area.

The cost of repairing a toilet can vary depending on the specific issue and the extent of the repairs needed. Here are some general estimates for common toilet repairs:

**1. Clogged toilet:** If you have a simple clog that can be cleared with a plunger or a toilet auger, you can fix it yourself at minimal cost. However, if the clog is severe and requires professional assistance, you might **expect to pay around \$100 to \$200.**

**2. Running toilet:** The cost to repair a running toilet typically ranges from **\$100 to \$250.** This can include fixing or replacing faulty components such as the flapper valve, fill valve, or float mechanism.

**3. Leaking toilet:** The cost to repair a leaking toilet will vary depending on the source of the leak. If it requires a simple fix like tightening a loose connection, the cost may be minimal. However, if there are cracks in the tank or bowl, or if any parts need replacement, the cost could be higher, ranging from **\$150 to \$400.**

**4. Weak flush:** Repairing a weak flush may involve adjusting the water level, cleaning or replacing the flapper valve, or clearing any blockages in the trapway or drain pipe. The cost can range from **\$100 to \$250.**

It's worth noting that these cost estimates are approximate and can vary based on several factors, including your location and the rates of plumbers in your area. It's always recommended to obtain multiple quotes from reputable plumbers to compare prices and ensure you're getting a fair deal.

If you're comfortable with DIY projects, you can attempt to troubleshoot and fix minor toilet issues yourself. However, for more complex problems or if you're unsure of what needs to be done, **it's best to hire a professional plumber to ensure the repairs are done correctly and to avoid additional damage.**

## Most common problem with toilet

The most common problem with toilets can vary, but some frequently encountered issues include:

- 1. Clogged Toilet:** This occurs when excessive toilet paper, foreign objects, or waste build-up obstructs the drain pipes, causing water to flow slowly or stop completely.
- 2. Running Toilet:** A common issue where water constantly runs into the toilet bowl even when it's not being flushed. This can waste water and may be caused by a faulty flapper valve or a problem with the fill valve.
- 3. Leaking Toilet:** When water leaks from the base or tank of the toilet, it can cause damage to the floor and waste water resources. The cause may be a faulty wax seal, loose bolts, or a cracked tank or bowl.
- 4. Weak Flush:** If your toilet doesn't flush properly, it could be due to a partial blockage

in the trap way or drain pipe, issues with the flapper valve, or inadequate water level in the tank.

**5. Overflowing Toilet:** This can be caused by a blockage in the drain pipe, a malfunctioning fill valve, or a problem with the float mechanism. It can lead to water damage and should be addressed promptly.

**If you are experiencing any of these common toilet problems, it's best to consider contacting a plumber.**

**Remember we are just a phone call away from you**

## **COMMON CAUSES OF TOILET CLOGGING**

To prevent clogging, you might want to avoid flushing the following items in the toilet.

### **Baby Wipes**

Unlike toilet paper, baby wipes won't flush. They are heavy and tend to glob together inside the drain, building up over time.

### **Diapers**

Together with baby wipes, this is one of the most common reasons why you might need fixing a clogged toilet. Diapers don't biodegrade and just one item might be enough to cause a clog

### **Cotton Pads**

These also do not break down. Cotton pads would snag other debris trying to flow past it, creating a blockage.

### **Dental Floss**

At first sight, this item might seem very unlikely to cause clogging. Yet a floss might easily turn into a net, trapping anything else coming after it.

### **Paper Towels**

They create blockages because they're made of a tougher blend of fibers. When you want to get rid of any toys, souvenirs or other items that are made of similar fibers, please throw them away together with dry garbage.
